- ⑤ 보호자 없이 학생끼리 여행하는 것은 안전하지 않다.

3. 대화를 듣고, 두 사람의 관계를 가장 잘 나타낸 것을 고르시오.

- ① 라디오 쇼 진행자 - 제빵사
- ② 리포터 - 과수원 주인
- ③ 광고주 - 요리사
- ④ 방송 작가 - 경제학자
- ⑤ 유통업자 - 농부

4. 대화를 듣고, 그림에서 대화의 내용과 일치하지 않는 것을 고르시오.

5. 대화를 듣고, 남자가 할 일로 가장 적절한 것을 고르시오.

- ① 리본 가져오기
- ② 선글라스 주문하기
- ③ 사진사 섭외하기
- ④ 설문 조사 실시하기
- ⑤ 졸업 연설문 작성하기

6. 대화를 듣고, 여자가 지불할 금액을 고르시오. [3점]

- ① \$36
- ② \$45
- ③ \$50
- ④ \$54
- ⑤ \$60

7. 대화를 듣고, 남자가 탁구 연습을 할 수 없는 이유를 고르시오.

- ① 학교 도서관에 자원봉사를 하러 가야 해서
- ② 과학 퀴즈를 위한 공부를 해야 해서
- ③ 연극부 모임에 참가해야 해서
- ④ 역사 숙제를 제출해야 해서
- ⑤ 어깨에 통증이 있어서

8. 대화를 듣고, Little Readers' Class에 관해 언급되지 않은 것을 고르시오.

- ① 장소
- ② 시간
- ③ 대상 연령
- ④ 모집 인원
- ⑤ 등록 방법

9. 2021 Family Science Festival에 관한 다음 내용을 듣고, 일치하지 않는 것을 고르시오.

- ① 12월 7일부터 일주일 동안 진행된다.
- ② 8개의 프로그램이 제공될 것이다.
- ③ 어린이 과학 잡지를 판매할 것이다.
- ④ 11세 미만의 어린이들은 성인을 동반해야 한다.
- ⑤ 참가를 위해 미리 등록해야 한다.

10. 다음 표를 보면서 대화를 듣고, 두 사람이 예약할 스터디 룸을 고르시오.

Study Rooms

Room	Capacity (persons)	Available Times	Price (per hour)	Projector
① A	2-3	9 a.m. - 11 a.m.	\$10	×
② B	4-6	9 a.m. - 11 a.m.	\$16	○
③ C	4-6	2 p.m. - 4 p.m.	\$14	×
④ D	6-8	2 p.m. - 4 p.m.	\$19	○
⑤ E	6-9	4 p.m. - 6 p.m.	\$21	×

11. 대화를 듣고, 여자의 마지막 말에 대한 남자의 응답으로 가장 적절한 것을 고르시오.

- ① Just give me about ten minutes.
- ② It took an hour for us to get back home.
- ③ I think you need to focus on your work.
- ④ It was nice of you to invite my co-workers.
- ⑤ Call me when you finish sending the email.

12. 대화를 듣고, 남자의 마지막 말에 대한 여자의 응답으로 가장 적절한 것을 고르시오.

- ① Excellent. I like the camera you bought for me.
- ② Good. I'll stop by and get it on my way home.
- ③ Never mind. I'll drop off the camera tomorrow.
- ④ I see. Thanks for taking those pictures of me.
- ⑤ No way. That's too expensive for the repair.

13. 대화를 듣고, 여자의 마지막 말에 대한 남자의 응답으로 가장 적절한 것을 고르시오. [3점]

Man: \_\_\_\_\_

- ① No worries. Stress is not always as bad as you think.
- ② Don't forget to bring a charger whenever you go out.
- ③ Great. That'll be a good way to take time for yourself.
- ④ I think working out too much will burn all your energy.
- ⑤ Fantastic. Let's enjoy ourselves at the exhibition with the kids.

14. 대화를 듣고, 남자의 마지막 말에 대한 여자의 응답으로 가장 적절한 것을 고르시오.

Woman: \_\_\_\_\_

- ① Please check it again. The hotel can't be fully booked.
- ② Too bad. I should've checked out as early as possible.
- ③ Sure. I'm very satisfied with your cleaning service.
- ④ I'm sorry. You can't switch your room with mine.
- ⑤ Perfect. That's high enough to avoid the smell.

15. 다음 상황 설명을 듣고, Jason이 Sarah에게 할 말로 가장 적절한 것을 고르시오. [3점]

Jason: \_\_\_\_\_

- ① Good luck. I hope you finish your work in time.
- ② Okay. Let's meet to discuss the changes to the sculpture.
- ③ That's terrible. I'm sorry that the reopening was postponed.
- ④ Hurry up. You have to send the final design immediately.
- ⑤ Don't worry. I can get the job done before the deadline.

[16~17] 다음을 듣고, 물음에 답하십시오.

16. 남자가 하는 말의 주제로 가장 적절한 것은?

- ① effects of incorporating painting into math education
- ② mathematical analysis of the art industry's growth
- ③ application of mathematics in different types of art
- ④ historical review of important concepts in the arts
- ⑤ challenges of harmonizing mathematics and art

17. 언급된 예술 분야가 아닌 것은?

- ① music                      ② painting                      ③ photography
- ④ dance                        ⑤ cinema

이제 듣기 문제가 끝났습니다. 18번부터는 문제지의 지시에 따라 답을 하시기 바랍니다.

18. 다음 글의 목적으로 가장 적절한 것은?

Dear Ms. Green,

My name is Donna Williams, a science teacher at Rogan High School. I am planning a special workshop for our science teachers. We are interested in learning how to teach online science classes. I have been impressed with your ideas about using internet platforms for science classes. Since you are an expert in online education, I would like to ask you to deliver a special lecture at the workshop scheduled for next month. I am sure the lecture will help our teachers manage successful online science classes, and I hope we can learn from your insights. I am looking forward to hearing from you.

Sincerely,  
Donna Williams

- ③ 과학 교사 채용 계획을 공지하려고
- ④ 과학 교육 프로그램 개발을 요청하려고
- ⑤ 과학 교육 워크숍 일정의 변경을 안내하려고

19. 다음 글에 나타난 Evelyn의 심경 변화로 가장 적절한 것은?

It was Evelyn's first time to explore the Badlands of Alberta, famous across Canada for its numerous dinosaur fossils. As a young amateur bone-hunter, she was overflowing with anticipation. She had not travelled this far for the bones of common dinosaur species. Her life-long dream to find rare fossils of dinosaurs was about to come true. She began eagerly searching for them. After many hours of wandering throughout the deserted lands, however, she was unsuccessful. Now, the sun was beginning to set, and her goal was still far beyond her reach. Looking at the slowly darkening ground before her, she sighed to herself, "I can't believe I came all this way for nothing. What a waste of time!"

- ① confused → scared                      ② discouraged → confident
- ③ relaxed → annoyed                      ④ indifferent → depressed
- ⑤ hopeful → disappointed

20. 다음 글에서 필자가 주장하는 바로 가장 적절한 것은?

One of the most common mistakes made by organizations when they first consider experimenting with social media is that they focus too much on social media tools and platforms and not enough on their business objectives. The reality of success in the social web for businesses is that creating a social media program begins not with insight into the latest social media tools and channels but with a thorough understanding of the organization's own goals and objectives. A social media program is not merely the fulfillment of a vague need to manage a "presence" on popular social networks because "everyone else is doing it." "Being in social media" serves no purpose in and of itself. In order to serve any purpose at all, a social media presence must either solve a problem for the organization and its customers or result in an improvement of some sort (preferably a measurable one). In all things, purpose drives success. The world of social media is no different.

21. 밑줄 친 whether to make ready for the morning commute or not이 다음 글에서 의미하는 바로 가장 적절한 것은? [3점]

Scientists have no special purchase on moral or ethical decisions; a climate scientist is no more qualified to comment on health care reform than a physicist is to judge the causes of bee colony collapse. The very features that create expertise in a specialized domain lead to ignorance in many others. In some cases lay people — farmers, fishermen, patients, native peoples — may have relevant experiences that scientists can learn from. Indeed, in recent years, scientists have begun to recognize this: the Arctic Climate Impact Assessment includes observations gathered from local native groups. So our trust needs to be limited, and focused. It needs to be very *particular*. Blind trust will get us into at least as much trouble as no trust at all. But without some degree of trust in our designated experts — the men and women who have devoted their lives to sorting out tough questions about the natural world we live in — we are paralyzed, in effect not knowing whether to make ready for the morning commute or not.

\* lay: 전문가가 아닌 \*\* paralyze: 마비시키다 \*\*\* commute: 통근

- ① questionable facts that have been popularized by non-experts
- ② readily applicable information offered by specialized experts
- ③ common knowledge that hardly influences crucial decisions
- ④ practical information produced by both specialists and lay people
- ⑤ biased knowledge that is widespread in the local community

22. 다음 글의 요지로 가장 적절한 것은?

Environmental hazards include biological, physical, and chemical ones, along with the human behaviors that promote or allow exposure. Some environmental contaminants are difficult to avoid (the breathing of polluted air, the drinking of chemically contaminated public drinking water, noise in open public spaces); in these circumstances, exposure is largely involuntary. Reduction or elimination of these factors may require societal action, such as public awareness and public health measures. In many countries, the fact that some environmental hazards are difficult to avoid at the individual level is felt to be more morally egregious than those hazards that can be avoided. Having no choice but to drink water contaminated with very high levels of arsenic, or being forced to passively breathe in tobacco smoke in restaurants, outrages people more than the personal choice of whether an individual smokes tobacco. These factors are important when one considers how change (risk reduction) happens.

\* contaminate: 오염시키다 \*\* egregious: 매우 나쁜

- ① 개인이 피하기 어려운 유해 환경 요인에 대해서는 사회적 대응이 필요하다.
- ② 환경오염으로 인한 피해자들에게 적절한 보상을 하는 것이 바람직하다.
- ③ 다수의 건강을 해치는 행위에 대해 도덕적 비난 이상의 조치가 요구된다.
- ④ 환경오염 문제를 해결하기 위해서는 사후 대응보다 예방이 중요하다.
- ⑤ 대기오염 문제는 인접 국가들과의 긴밀한 협력을 통해 해결할 수 있다.

Scientists *use* paradigms rather than believing them. The use of a paradigm in research typically addresses related problems by employing shared concepts, symbolic expressions, experimental and mathematical tools and procedures, and even some of the same theoretical statements. Scientists need only understand *how* to use these various elements in ways that others would accept. These elements of shared practice thus need not presuppose any comparable unity in scientists' beliefs about what they are doing when they use them. Indeed, one role of a paradigm is to enable scientists to work successfully without having to provide a detailed account of what they are doing or what they believe about it. Thomas Kuhn noted that scientists "can agree in their *identification* of a paradigm without agreeing on, or even attempting to produce, a full *interpretation* or *rationalization* of it. Lack of a standard interpretation or of an agreed reduction to rules will not prevent a paradigm from guiding research."

- ① difficulty in drawing novel theories from existing paradigms
- ② significant influence of personal beliefs in scientific fields
- ③ key factors that promote the rise of innovative paradigms
- ④ roles of a paradigm in grouping like-minded researchers
- ⑤ functional aspects of a paradigm in scientific research

Mending and restoring objects often require even more creativity than original production. The preindustrial blacksmith made things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine. Customers would bring things back if something went wrong; repair was thus an extension of fabrication. With industrialization and eventually with mass production, making things became the province of machine tenders with limited knowledge. But repair continued to require a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. "Manufacturers all work by machinery or by vast subdivision of labour and not, so to speak, by hand," an 1896 *Manual of Mending and Repairing* explained. "But all repairing *must* be done by hand. We can make every detail of a watch or of a gun by machinery, but the machine cannot mend it when broken, much less a clock or a pistol!"

The above graphs show the percentage share of the global middle class by region in 2015 and its projected share in 2025. ① It is projected that the share of the global middle class in Asia Pacific will increase from 46 percent in 2015 to 60 percent in 2025. ② The projected share of Asia Pacific in 2025, the largest among the six regions, is more than three times that of Europe in the same year. ③ The shares of Europe and North America are both projected to decrease, from 24 percent in 2015 to 16 percent in 2025 for Europe, and from 11 percent in 2015 to 8 percent in 2025 for North America. ④ Central and South America is not expected to change from 2015 to 2025 in its share of the global middle class. ⑤ In 2025, the share of the Middle East and North Africa will be larger than that of sub-Saharan Africa, as it was in 2015.

26. Donato Bramante에 관한 다음 글의 내용과 일치하지 않는 것은?

Donato Bramante, born in Fermignano, Italy, began to paint early in his life. His father encouraged him to study painting. Later, he worked as an assistant of Piero della Francesca in Urbino. Around 1480, he built several churches in a new style in Milan. He had a close relationship with Leonardo da Vinci, and they worked together in that city. Architecture became his main interest, but he did not give up painting. Bramante moved to Rome in 1499 and participated in Pope Julius II's plan for the renewal of Rome. He planned the new Basilica of St. Peter in Rome — one of the most ambitious building projects in the history of humankind. Bramante died on April 11, 1514 and was buried in Rome. His buildings influenced other architects for centuries.

- ① Piero della Francesca의 조수로 일했다.
- ② Milan에서 새로운 양식의 교회들을 건축했다.

33. Elinor Ostrom found that there are several factors critical to bringing about stable institutional solutions to the problem of the commons. She pointed out, for instance, that the actors affected by the rules for the use and care of resources must have the right to \_\_\_\_\_.

For that reason, the people who monitor and control the behavior of users should also be users and/or have been given a mandate by all users. This is a significant insight, as it shows that prospects are poor for a centrally directed solution to the problem of the commons coming from a state power in comparison with a local solution for which users assume personal responsibility. Ostrom also emphasizes the importance of democratic decision processes and that all users must be given access to local forums for solving problems and conflicts among themselves. Political institutions at central, regional, and local levels must allow users to devise their own regulations and independently ensure observance. [3점]

\* commons: 공유지 \*\* mandate: 위임

- ① participate in decisions to change the rules
- ② claim individual ownership of the resources
- ③ use those resources to maximize their profits
- ④ demand free access to the communal resources
- ⑤ request proper distribution based on their merits

34. Precision and determinacy are a necessary requirement for all meaningful scientific debate, and progress in the sciences is, to a large extent, the ongoing process of achieving ever greater precision. But historical representation puts a premium on a proliferation of representations, hence not on the refinement of one representation but on the production of an ever more varied set of representations. Historical insight is not a matter of a continuous “narrowing down” of previous options, not of an approximation of the truth, but, on the contrary, is an “explosion” of possible points of view. It therefore aims at the unmasking of previous illusions of determinacy and precision by the production of new and alternative representations, rather than at achieving truth by a careful analysis of what was right and wrong in those previous representations. And from this perspective, the development of historical insight may indeed be regarded by the outsider as a process of creating ever more confusion, a continuous questioning of \_\_\_\_\_, rather than, as in the sciences, an ever greater approximation to the truth. [3점]

\* proliferation: 증식

- ① criteria for evaluating historical representations
- ② certainty and precision seemingly achieved already
- ③ possibilities of alternative interpretations of an event
- ④ coexistence of multiple viewpoints in historical writing
- ⑤ correctness and reliability of historical evidence collected

Since their introduction, information systems have substantially changed the way business is conducted. ① This is particularly true for business in the shape and form of cooperation between firms that involves an integration of value chains across multiple units. ② The resulting networks do not only cover the business units of a single firm but typically also include multiple units from different firms. ③ As a consequence, firms do not only need to consider their internal organization in order to ensure sustainable business performance; they also need to take into account the entire ecosystem of units surrounding them. ④ Many major companies are fundamentally changing their business models by focusing on profitable units and cutting off less profitable ones. ⑤ In order to allow these different units to cooperate successfully, the existence of a common platform is crucial.

According to the market response model, it is increasing prices that drive providers to search for new sources, innovators to substitute, consumers to conserve, and alternatives to emerge.

- (A) Many examples of such “green taxes” exist. Facing landfill costs, labor expenses, and related costs in the provision of garbage disposal, for example, some cities have required households to dispose of all waste in special trash bags, purchased by consumers themselves, and often costing a dollar or more each.
- (B) Taxing certain goods or services, and so increasing prices, should result in either decreased use of these resources or creative innovation of new sources or options. The money raised through the tax can be used directly by the government either to supply services or to search for alternatives.
- (C) The results have been greatly increased recycling and more careful attention by consumers to packaging and waste. By internalizing the costs of trash to consumers, there has been an observed decrease in the flow of garbage from households.

In spite of the likeness between the fictional and real world, the fictional world deviates from the real one in one important respect.

- (A) The author has selected the content according to his own worldview and his own conception of relevance, in an attempt to be neutral and objective or convey a subjective view on the world. Whatever the motives, the author's subjective conception of the world stands between the reader and the original, untouched world on which the story is based.
- (B) Because of the inner qualities with which the individual is endowed through heritage and environment, the mind functions as a filter; every outside impression that passes through it is filtered and interpreted. However, the world the reader encounters in literature is already processed and filtered by another consciousness.
- (C) The existing world faced by the individual is in principle an infinite chaos of events and details before it is organized by a human mind. This chaos only gets processed and modified when perceived by a human mind. [3점]

Retraining current employees for new positions within the company will also greatly reduce their fear of being laid off.

Introduction of robots into factories, while employment of human workers is being reduced, creates worry and fear. ( ① ) It is the responsibility of management to prevent or, at least, to ease these fears. ( ② ) For example, robots could be introduced only in new plants rather than replacing humans in existing assembly lines. ( ③ ) Workers should be included in the planning for new factories or the introduction of robots into existing plants, so they can participate in the process. ( ④ ) It may be that robots are needed to reduce manufacturing costs so that the company remains competitive, but planning for such cost reductions should be done jointly by labor and management. ( ⑤ ) Since robots are particularly good at highly repetitive simple motions, the replaced human workers should be moved to positions where judgment and decisions beyond the abilities of robots are required.

As long as the irrationalism of the silent black and white film predominated, one could not take filmic fantasies for representations of reality.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to reveal what reality itself veils — the dimension of fantasy. ( ① ) This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. ( ② ) Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary. ( ③ ) And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially transforming film into a mere delivery device for representations of reality. ( ④ ) But sound and color threatened to create just such an illusion, thereby destroying the very essence of film art. ( ⑤ ) As Rudolf Arnheim puts it, "The creative power of the artist can only come into play where reality and the medium of representation do not coincide." [3점]

Philip Kitcher and Wesley Salmon have suggested that there are two possible alternatives among philosophical theories of explanation. One is the view that scientific explanation consists in the *unification* of broad bodies of phenomena under a minimal number of generalizations. According to this view, the (or perhaps, a) goal of science is to construct an economical framework of laws or generalizations that are capable of subsuming all observable phenomena. Scientific explanations organize and systematize our knowledge of the empirical world; the more economical the systematization, the deeper our understanding of what is explained. The other view is the *causal/mechanical* approach. According to it, a scientific explanation of a phenomenon consists of uncovering the mechanisms that produced the phenomenon of interest. This view sees the explanation of individual events as primary, with the explanation of generalizations flowing from them. That is, the explanation of scientific generalizations comes from the causal mechanisms that produce the regularities.

\* subsume: 포섭(포함)하다 \*\* empirical: 경험적인

Scientific explanations can be made either by seeking the \_\_\_\_\_ (A) \_\_\_\_\_ number of principles covering all observations or by finding general \_\_\_\_\_ (B) \_\_\_\_\_ drawn from individual phenomena.

Classifying things together into groups is something we do all the time, and it isn't hard to see why. Imagine trying to shop in a supermarket where the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding what you want would be (a) time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone had to (b) design the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and distinguishes them from other animals. Such a grouping may seem too (c) abstract to be called a classification, but this is only because you have already mastered the word. As a child learning to speak, you had to work hard to (d) learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog. If you hadn't learned to speak, the whole world would seem like the (e) unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, therefore, we'll be learning about the structure that lies at the core of our language.

(A)

In the gym, members of the taekwondo club were busy practicing. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be expecting someone. At last, when Anna took a break, Jane came over to (a) her and asked, "Hey, are you waiting for Cora?"

(B)

Cora walked in like a wounded soldier with bandages on her face and arms. Surprised, Anna and Jane simply looked at her with their eyes wide open. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice." Anna said excitedly, "No problem! We're thrilled to have you back!" Then, Jane gave Anna an apologetic look, and (b) she responded with a friendly pat on Jane's shoulder.

(C)

Anna answered the question by nodding uneasily. In fact, Jane knew what her friend was thinking. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked (c) her. Although her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never showed up again.

(D)

Since Cora had missed several practices, Anna wondered what could have happened. Jane, on the other hand, was disappointed and said judgmentally, "Still waiting for her, huh? I can't believe (d) you don't feel disappointed or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought that Cora would be different. She said she would come every day and practice." Just as Jane was about to respond to (e) her, the door swung open. There she was!

18. 다음 글의 목적으로 가장 적절한 것은?

Dear Ms. Green,

My name is Donna Williams, a science teacher at Rogan High School. I am planning a special workshop for our science teachers. We are interested in learning how to teach online science classes. I have been impressed with your ideas about using internet platforms for science classes. Since you are an expert in online education, I would like to ask you to deliver a special lecture at the workshop scheduled for next month. I am sure the lecture will help our teachers manage successful online science classes, and I hope we can learn from your insights. I am looking forward to hearing from you.

Sincerely,  
Donna Williams

19. 다음 글에 나타난 Evelyn의 심경 변화로 가장 적절한 것은?

It was Evelyn's first time to explore the Badlands of Alberta, famous across Canada for its numerous dinosaur fossils. As a young amateur bone-hunter, she was overflowing with anticipation. She had not travelled this far for the bones of common dinosaur species. Her life-long dream to find rare fossils of dinosaurs was about to come true. She began eagerly searching for them. After many hours of wandering throughout the deserted lands, however, she was unsuccessful. Now, the sun was beginning to set, and her goal was still far beyond her reach. Looking at the slowly darkening ground before her, she sighed to herself, "I can't believe I came all this way for nothing. What a waste of time!"

One of the most common mistakes made by organizations when they first consider experimenting with social media is that they focus too much on social media tools and platforms and not enough on their business objectives. The reality of success in the social web for businesses is that creating a social media program begins not with insight into the latest social media tools and channels but with a thorough understanding of the organization's own goals and objectives. A social media program is not merely the fulfillment of a vague need to manage a "presence" on popular social networks because "everyone else is doing it." "Being in social media" serves no purpose in and of itself. In order to serve any purpose at all, a social media presence must either solve a problem for the organization and its customers or result in an improvement of some sort (preferably a measurable one). In all things, purpose drives success. The world of social media is no different.

21. 밑줄 친 whether to make ready for the morning commute or not이 다음 글에서 의미하는 바로 가장 적절한 것은? [3점]

Scientists have no special purchase on moral or ethical decisions; a climate scientist is no more qualified to comment on health care reform than a physicist is to judge the causes of bee colony collapse. The very features that create expertise in a specialized domain lead to ignorance in many others. In some cases lay people — farmers, fishermen, patients, native peoples — may have relevant experiences that scientists can learn from. Indeed, in recent years, scientists have begun to recognize this: the Arctic Climate Impact Assessment includes observations gathered from local native groups. So our trust needs to be limited, and focused. It needs to be very *particular*. Blind trust will get us into at least as much trouble as no trust at all. But without some degree of trust in our designated experts — the men and women who have devoted their lives to sorting out tough questions about the natural world we live in — we are paralyzed, in effect not knowing whether to make ready for the morning commute or not.

\* lay: 전문가가 아닌 \*\* paralyze: 마비시키다 \*\*\* commute: 통근

- ① readily applicable information offered by specialized experts
- ② questionable facts that have been popularized by non-experts
- ③ common knowledge that hardly influences crucial decisions
- ④ practical information produced by both specialists and lay people
- ⑤ biased knowledge that is widespread in the local community

22. 다음 글의 요지로 가장 적절한 것은?

Environmental hazards include biological, physical, and chemical ones, along with the human behaviors that promote or allow exposure. Some environmental contaminants are difficult to avoid (the breathing of polluted air, the drinking of chemically contaminated public drinking water, noise in open public spaces); in these circumstances, exposure is largely involuntary. Reduction or elimination of these factors may require societal action, such as public awareness and public health measures. In many countries, the fact that some environmental hazards are difficult to avoid at the individual level is felt to be more morally egregious than those hazards that can be avoided. Having no choice but to drink water contaminated with very high levels of arsenic, or being forced to passively breathe in tobacco smoke in restaurants, outrages people more than the personal choice of whether an individual smokes tobacco. These factors are important when one considers how change (risk reduction) happens.

\* contaminate: 오염시키다 \*\* egregious: 매우 나쁜

- ① 환경오염으로 인한 피해자들에게 적절한 보상을 하는 것이 바람직하다.
- ② 개인이 피하기 어려운 유해 환경 요인에 대해서는 사회적 대응이 필요하다.
- ③ 다수의 건강을 해치는 행위에 대해 도덕적 비난 이상의 조치가 요구된다.

Scientists *use* paradigms rather than believing them. The use of a paradigm in research typically addresses related problems by employing shared concepts, symbolic expressions, experimental and mathematical tools and procedures, and even some of the same theoretical statements. Scientists need only understand *how* to use these various elements in ways that others would accept. These elements of shared practice thus need not presuppose any comparable unity in scientists' beliefs about what they are doing when they use them. Indeed, one role of a paradigm is to enable scientists to work successfully without having to provide a detailed account of what they are doing or what they believe about it. Thomas Kuhn noted that scientists "can agree in their *identification* of a paradigm without agreeing on, or even attempting to produce, a full *interpretation* or *rationalization* of it. Lack of a standard interpretation or of an agreed reduction to rules will not prevent a paradigm from guiding research."

- ① functional aspects of a paradigm in scientific research
- ② roles of a paradigm in grouping like-minded researchers
- ③ key factors that promote the rise of innovative paradigms
- ④ significant influence of personal beliefs in scientific fields
- ⑤ difficulty in drawing novel theories from existing paradigms

Mending and restoring objects often require even more creativity than original production. The preindustrial blacksmith made things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine. Customers would bring things back if something went wrong; repair was thus an extension of fabrication. With industrialization and eventually with mass production, making things became the province of machine tenders with limited knowledge. But repair continued to require a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. "Manufacturers all work by machinery or by vast subdivision of labour and not, so to speak, by hand," an 1896 *Manual of Mending and Repairing* explained. "But all repairing *must* be done by hand. We can make every detail of a watch or of a gun by machinery, but the machine cannot mend it when broken, much less a clock or a pistol!"

The above graphs show the percentage share of the global middle class by region in 2015 and its projected share in 2025. ① It is projected that the share of the global middle class in Asia Pacific will increase from 46 percent in 2015 to 60 percent in 2025. ② The projected share of Asia Pacific in 2025, the largest among the six regions, is more than three times that of Europe in the same year. ③ The shares of Europe and North America are both projected to decrease, from 24 percent in 2015 to 16 percent in 2025 for Europe, and from 11 percent in 2015 to 8 percent in 2025 for North America. ④ Central and South America is not expected to change from 2015 to 2025 in its share of the global middle class. ⑤ In 2025, the share of the Middle East and North Africa will be larger than that of sub-Saharan Africa, as it was in 2015.

26. Donato Bramante에 관한 다음 글의 내용과 일치하지 않는 것은?

Donato Bramante, born in Fermignano, Italy, began to paint early in his life. His father encouraged him to study painting. Later, he worked as an assistant of Piero della Francesca in Urbino. Around 1480, he built several churches in a new style in Milan. He had a close relationship with Leonardo da Vinci, and they worked together in that city. Architecture became his main interest, but he did not give up painting. Bramante moved to Rome in 1499 and participated in Pope Julius II's plan for the renewal of Rome. He planned the new Basilica of St. Peter in Rome — one of the most ambitious building projects in the history of humankind. Bramante died on April 11, 1514 and was buried in Rome. His buildings influenced other architects for centuries.

33. Elinor Ostrom found that there are several factors critical to bringing about stable institutional solutions to the problem of the commons. She pointed out, for instance, that the actors affected by the rules for the use and care of resources must have the right to \_\_\_\_\_.

For that reason, the people who monitor and control the behavior of users should also be users and/or have been given a mandate by all users. This is a significant insight, as it shows that prospects are poor for a centrally directed solution to the problem of the commons coming from a state power in comparison with a local solution for which users assume personal responsibility. Ostrom also emphasizes the importance of democratic decision processes and that all users must be given access to local forums for solving problems and conflicts among themselves. Political institutions at central, regional, and local levels must allow users to devise their own regulations and independently ensure observance. [3점]

\* commons: 공유지 \*\* mandate: 위임

- ① request proper distribution based on their merits
- ② demand free access to the communal resources
- ③ use those resources to maximize their profits
- ④ claim individual ownership of the resources
- ⑤ participate in decisions to change the rules

34. Precision and determinacy are a necessary requirement for all meaningful scientific debate, and progress in the sciences is, to a large extent, the ongoing process of achieving ever greater precision. But historical representation puts a premium on a proliferation of representations, hence not on the refinement of one representation but on the production of an ever more varied set of representations. Historical insight is not a matter of a continuous “narrowing down” of previous options, not of an approximation of the truth, but, on the contrary, is an “explosion” of possible points of view. It therefore aims at the unmasking of previous illusions of determinacy and precision by the production of new and alternative representations, rather than at achieving truth by a careful analysis of what was right and wrong in those previous representations. And from this perspective, the development of historical insight may indeed be regarded by the outsider as a process of creating ever more confusion, a continuous questioning of \_\_\_\_\_, rather than, as in the sciences, an ever greater approximation to the truth. [3점]

\* proliferation: 증식

- ① criteria for evaluating historical representations
- ② certainty and precision seemingly achieved already
- ③ possibilities of alternative interpretations of an event
- ④ coexistence of multiple viewpoints in historical writing
- ⑤ correctness and reliability of historical evidence collected

Since their introduction, information systems have substantially changed the way business is conducted. ① This is particularly true for business in the shape and form of cooperation between firms that involves an integration of value chains across multiple units. ② The resulting networks do not only cover the business units of a single firm but typically also include multiple units from different firms. ③ As a consequence, firms do not only need to consider their internal organization in order to ensure sustainable business performance; they also need to take into account the entire ecosystem of units surrounding them. ④ Many major companies are fundamentally changing their business models by focusing on profitable units and cutting off less profitable ones. ⑤ In order to allow these different units to cooperate successfully, the existence of a common platform is crucial.

According to the market response model, it is increasing prices that drive providers to search for new sources, innovators to substitute, consumers to conserve, and alternatives to emerge.

- (A) Many examples of such “green taxes” exist. Facing landfill costs, labor expenses, and related costs in the provision of garbage disposal, for example, some cities have required households to dispose of all waste in special trash bags, purchased by consumers themselves, and often costing a dollar or more each.
- (B) Taxing certain goods or services, and so increasing prices, should result in either decreased use of these resources or creative innovation of new sources or options. The money raised through the tax can be used directly by the government either to supply services or to search for alternatives.
- (C) The results have been greatly increased recycling and more careful attention by consumers to packaging and waste. By internalizing the costs of trash to consumers, there has been an observed decrease in the flow of garbage from households.

In spite of the likeness between the fictional and real world, the fictional world deviates from the real one in one important respect.

- (A) The author has selected the content according to his own worldview and his own conception of relevance, in an attempt to be neutral and objective or convey a subjective view on the world. Whatever the motives, the author's subjective conception of the world stands between the reader and the original, untouched world on which the story is based.
- (B) Because of the inner qualities with which the individual is endowed through heritage and environment, the mind functions as a filter; every outside impression that passes through it is filtered and interpreted. However, the world the reader encounters in literature is already processed and filtered by another consciousness.
- (C) The existing world faced by the individual is in principle an infinite chaos of events and details before it is organized by a human mind. This chaos only gets processed and modified when perceived by a human mind. [3점]

Retraining current employees for new positions within the company will also greatly reduce their fear of being laid off.

Introduction of robots into factories, while employment of human workers is being reduced, creates worry and fear. ( ① ) It is the responsibility of management to prevent or, at least, to ease these fears. ( ② ) For example, robots could be introduced only in new plants rather than replacing humans in existing assembly lines. ( ③ ) Workers should be included in the planning for new factories or the introduction of robots into existing plants, so they can participate in the process. ( ④ ) It may be that robots are needed to reduce manufacturing costs so that the company remains competitive, but planning for such cost reductions should be done jointly by labor and management. ( ⑤ ) Since robots are particularly good at highly repetitive simple motions, the replaced human workers should be moved to positions where judgment and decisions beyond the abilities of robots are required.

As long as the irrationalism of the silent black and white film predominated, one could not take filmic fantasies for representations of reality.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to reveal what reality itself veils — the dimension of fantasy. ( ① ) This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. ( ② ) Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary. ( ③ ) And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially transforming film into a mere delivery device for representations of reality. ( ④ ) But sound and color threatened to create just such an illusion, thereby destroying the very essence of film art. ( ⑤ ) As Rudolf Arnheim puts it, "The creative power of the artist can only come into play where reality and the medium of representation do not coincide." [3점]

Philip Kitcher and Wesley Salmon have suggested that there are two possible alternatives among philosophical theories of explanation. One is the view that scientific explanation consists in the *unification* of broad bodies of phenomena under a minimal number of generalizations. According to this view, the (or perhaps, a) goal of science is to construct an economical framework of laws or generalizations that are capable of subsuming all observable phenomena. Scientific explanations organize and systematize our knowledge of the empirical world; the more economical the systematization, the deeper our understanding of what is explained. The other view is the *causal/mechanical* approach. According to it, a scientific explanation of a phenomenon consists of uncovering the mechanisms that produced the phenomenon of interest. This view sees the explanation of individual events as primary, with the explanation of generalizations flowing from them. That is, the explanation of scientific generalizations comes from the causal mechanisms that produce the regularities.

Scientific explanations can be made either by seeking the \_\_\_\_\_ (A) \_\_\_\_\_ number of principles covering all observations or by finding general \_\_\_\_\_ (B) \_\_\_\_\_ drawn from individual phenomena.

Classifying things together into groups is something we do all the time, and it isn't hard to see why. Imagine trying to shop in a supermarket where the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding what you want would be (a) time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone had to (b) design the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and distinguishes them from other animals. Such a grouping may seem too (c) abstract to be called a classification, but this is only because you have already mastered the word. As a child learning to speak, you had to work hard to (d) learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog. If you hadn't learned to speak, the whole world would seem like the (e) unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, therefore, we'll be learning about the structure that lies at the core of our language.

(A)

In the gym, members of the taekwondo club were busy practicing. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be expecting someone. At last, when Anna took a break, Jane came over to (a) her and asked, "Hey, are you waiting for Cora?"

(B)

Cora walked in like a wounded soldier with bandages on her face and arms. Surprised, Anna and Jane simply looked at her with their eyes wide open. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice." Anna said excitedly, "No problem! We're thrilled to have you back!" Then, Jane gave Anna an apologetic look, and (b) she responded with a friendly pat on Jane's shoulder.

(C)

Anna answered the question by nodding uneasily. In fact, Jane knew what her friend was thinking. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked (c) her. Although her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never showed up again.

(D)

Since Cora had missed several practices, Anna wondered what could have happened. Jane, on the other hand, was disappointed and said judgmentally, "Still waiting for her, huh? I can't believe (d) you don't feel disappointed or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought that Cora would be different. She said she would come every day and practice." Just as Jane was about to respond to (e) her, the door swung open. There she was!
